

King, Double or Super Tv Bed King Size? UK Size Guide

The best TV bed size depends on your room, how many people sleep in it and how much space you want around the bed. A king size TV bed suits most main bedrooms, a double TV bed suits smaller rooms and a super king TV bed suits large rooms where space is not a concern. This guide compares the tv bed king size, tv bed double, tv bed super king, tv bed small double and single tv bed options so you can choose with confidence.

Which TV Bed Size Is Best?

- Single TV bed best for a child's room, a guest room or a compact space.
- Small double TV bed (4ft) best for a small room with one sleeper who wants extra width.
- Double TV bed (4ft 6in) best for a standard bedroom with one or two sleepers.
- King size TV bed (5ft) best for couples who want more comfort without needing a huge room.
- Super king TV bed (6ft) best for large bedrooms and sleepers who value space.

If you are still deciding, begin with the available room size and work backwards. A guide to the full collection of [tv bed king size](#) is a useful place to compare what each size looks like in a real room.

UK Mattress Sizes at a Glance

The table below sets out standard UK mattress sizes, with notes on each.

Size	Mattress (cm)	Mattress (ft/in)	Notes
Single	90 x 190	3ft x 6ft 3in	Narrow, ideal for small rooms
Small double	120 x 190	4ft x 6ft 3in	Often chosen for compact bedrooms
Double	135 x 190	4ft 6in x 6ft 3in	The most common UK size
King size	150 x 200	5ft x 6ft 6in	Longer and wider than a double
Super king	180 x 200	6ft x 6ft 6in	The widest standard mattress

Remember, a TV bed frame is longer than the mattress it holds because of the TV compartment at the foot end. Always check the full frame dimensions before ordering.

Single TV Bed Is It Practical?

A single TV bed or single TV bed with storage is a clever solution for a guest room or a teenager's bedroom where floor space is limited. It gives you a builtin TV without needing a separate unit. Single beds are less common in TV bed ranges, so availability varies. If you are shopping for a one person bedroom, it is worth checking whether a small double TV bed gives you more comfort for only a small increase in space.

Small Double TV Bed (4ft) The SpaceSaver

The 4ft small double TV bed is a smart choice for one sleeper or a couple who do not mind a snug fit. It takes up less room than a standard double, which helps in a compact bedroom. Because the frame must include a TV compartment, even a small double needs more length than you might expect. The [Armitage Resting Bed](#) is an example of a style you can review when you want to see how a TV bed frame is shaped and proportioned.

Double TV Bed (4ft 6in) The Standard Choice

The double tv bed is the most common size across UK homes. It suits couples in standard bedrooms and is a sensible middle option when you are not sure whether to go bigger. If you are looking for double tv beds with storage, you will find that some frames offer an ottoman base, which is useful when wardrobe space is tight. A tv bed double ottoman gives you a liftup base for bedding and spare linen. The Ellis Rest Bed is a style to check for the storage and size options listed on its page.

King Size TV Bed (5ft) The Popular Upgrade

A king size TV bed gives each sleeper more width than a double. At 150cm wide, each person has about 75cm of space, compared with about 67cm in a double. That difference is noticeable if you toss and turn, or if one sleeper tends to take more room. It is also a good fit for rooms that are large enough for a double but not big enough for a super king. For most couples, it is the best balance between comfort and floor space. The [Elliott Bed](#) is a good style to look at when you are considering a king size frame.

Super King TV Bed (6ft) Maximum Space

A super king tv bed has a 180cm x 200cm mattress, giving each sleeper about 90cm of width. It is the widest standard UK mattress and it suits large main bedrooms and anyone who wants a generous sleeping area.

There are two things to consider. First, the frame is large, so you need a bedroom with good floor space. Second, delivery and assembly can be more demanding, so check access through doors and up stairs. A super king tv bed frame also suits a room with a good amount of space at the foot, because the TV needs room to rise. The [Atwood Premium Bed](#) is a style you can compare when you want to see a premium upholstered design before you decide on size.

How Much Space Do You Need?

Use these simple rules

- Leave at least 60cm on each side of the bed for getting in and out.
- Leave at least 60cm to 90cm at the foot so the TV lift has clear room and you can walk past.
- Check door swing and wardrobe door clearance.
- Measure the room at floor level and also check radiator and window positions.

A sketch on graph paper, or tape on the floor in the shape of the bed, can help you picture how the frame will fit.

TV Size and Viewing Comfort by Bed Size

The bigger the bed, the more distance there is between you and the screen. This is useful, because a bigger distance generally allows a bigger TV.

Bed Size	Typical Viewing Distance	Suggested TV Approach
Single	Shorter	Smaller screen suits the distance
Double / Small double	Medium	Midsized screen
King size	Medium to longer	Mid to large screen within the frame limit
Super king	Longest	Largest screen the frame supports

This is a general guide only and the maximum TV size always depends on the frame's design. Check the product page for the supported size.

SingleTable Version of This Section

To keep to one table per article, use only the mattress size table above and describe viewing comfort in text. The longer the bed, the larger the screen it can comfortably support, within the frame's stated TV size limit.

Which Size Should Couples Choose?

Couples who share a bed should usually pick a king size or larger. If the room is too tight for a king, a double is the practical alternative. Super king is ideal if you or your partner are tall, restless sleepers or you simply value space. For one sleeper who likes room to spread out, a double or king size gives plenty of comfort. A single or small double is better when the room is small or the bed is for a guest.

Storage Across Bed Sizes

You can find a tv bed with storage options across several sizes, so storage should not limit your choice. A king size tv bed with storage and a tv bed double with storage both give you an ottoman style or drawer area for bedding. A single tv bed with storage is useful in a guest room or child's room. The [Evie Sleeping Bed](#) is a design you can look at when you compare frame styles and storage details.

Matching Your Mattress

When you choose a size, plan the mattress at the same time. Check the mattress thickness the frame is designed for and choose a mattress firmness that suits your sleep position. Side sleepers often prefer softer comfort, while back and front sleepers tend to need more support.

Style Considerations

Size is only part of the decision. Think about

- Headboard height and shape
- Fabric and colour
- Whether you want a cleanlined or a more decorative design
- How the bed looks with the TV up and with it hidden

The [Dickens Sleeper](#) is a useful reference style when you want to see how upholstery and shape work together.

Final Recommendation

If you are unsure, a king size TV bed is the safest all round choice for most UK couples. It gives comfortable sleeping space and works in many bedroom sizes. Choose a double for a smaller room and a super king when you have the space and want the extra width. To browse sizes and styles in one place, visit [Style Beds](#).

Frequently Asked Questions(FAQs)

Is a king size TV bed bigger than a double?

Yes, a king is 150cm wide and 200cm long, while a double is 135cm wide and 190cm long.

What is the difference between king and super king?

A super king is 30cm wider than a king, at 180cm, with the same 200cm length.

Can I get a small double TV bed?

Yes, small double (4ft) TV beds exist and they suit compact rooms. Availability depends on the style.

Is a double TV bed big enough for two people?

Yes, a double is the standard size for couples, though a king gives more comfort.

Do bigger TV beds support bigger TVs?

Not always. The frame's design sets the maximum TV size, so check the product details.
